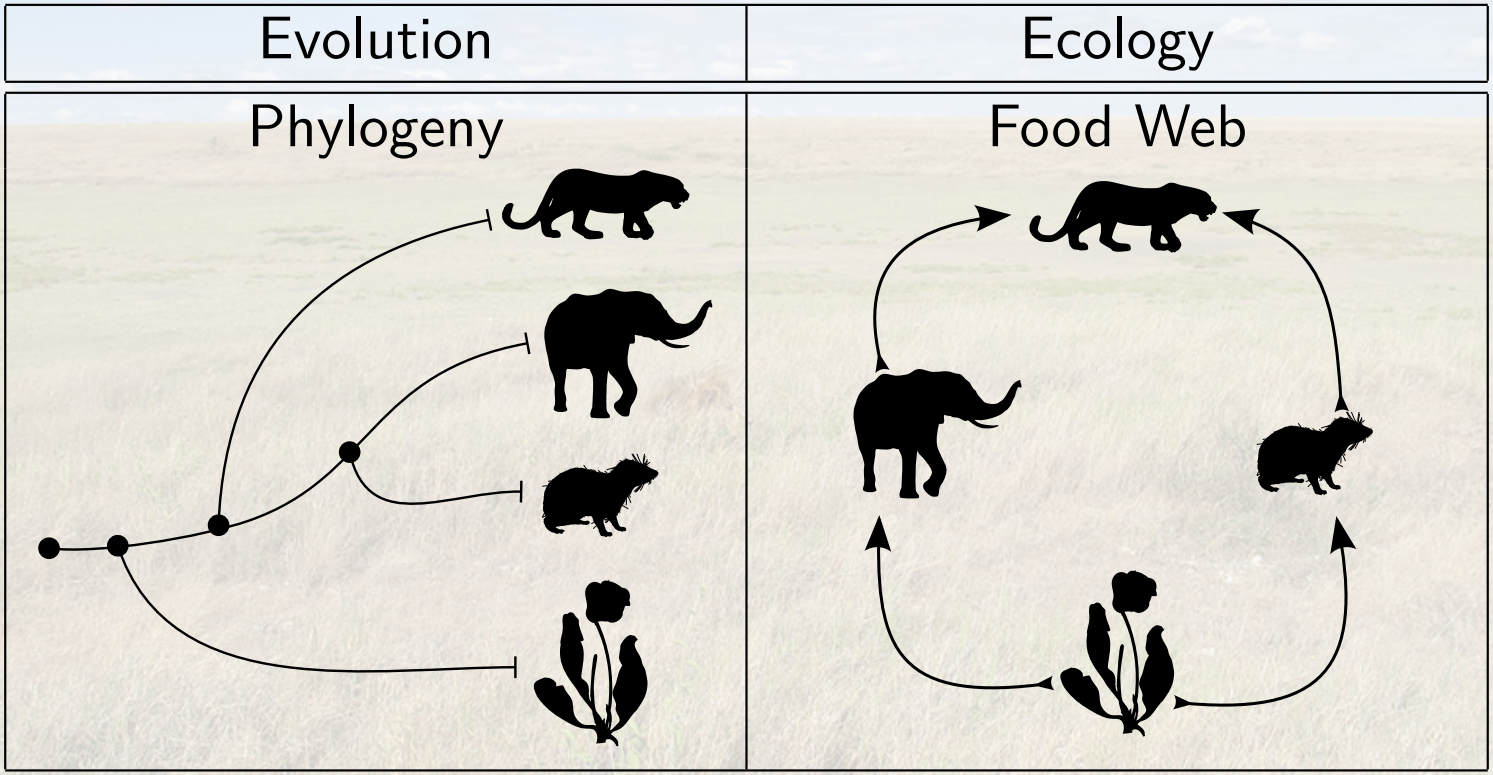
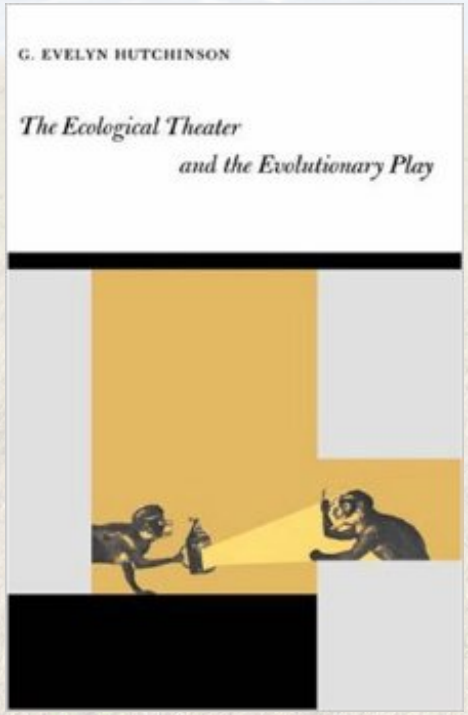
Why?



Why?

The Theater and the Play



Ecology and Evolution occur on different time scales?

Why?

Although species evolve and diversify in a complex network of species interactions, current models of diversification typically ignore species interactions. Inference approaches basedon joint phylogenetic and species interaction data allow testing the degree to which species interactions are evolutionarily conserved (Ives and Godfray 2006; Rezende et al. 2007), but do not allow analysing the effect of species interactions on diversification.
Helen Morlon - Ecology Letters (2014) ***17****: 508-525*

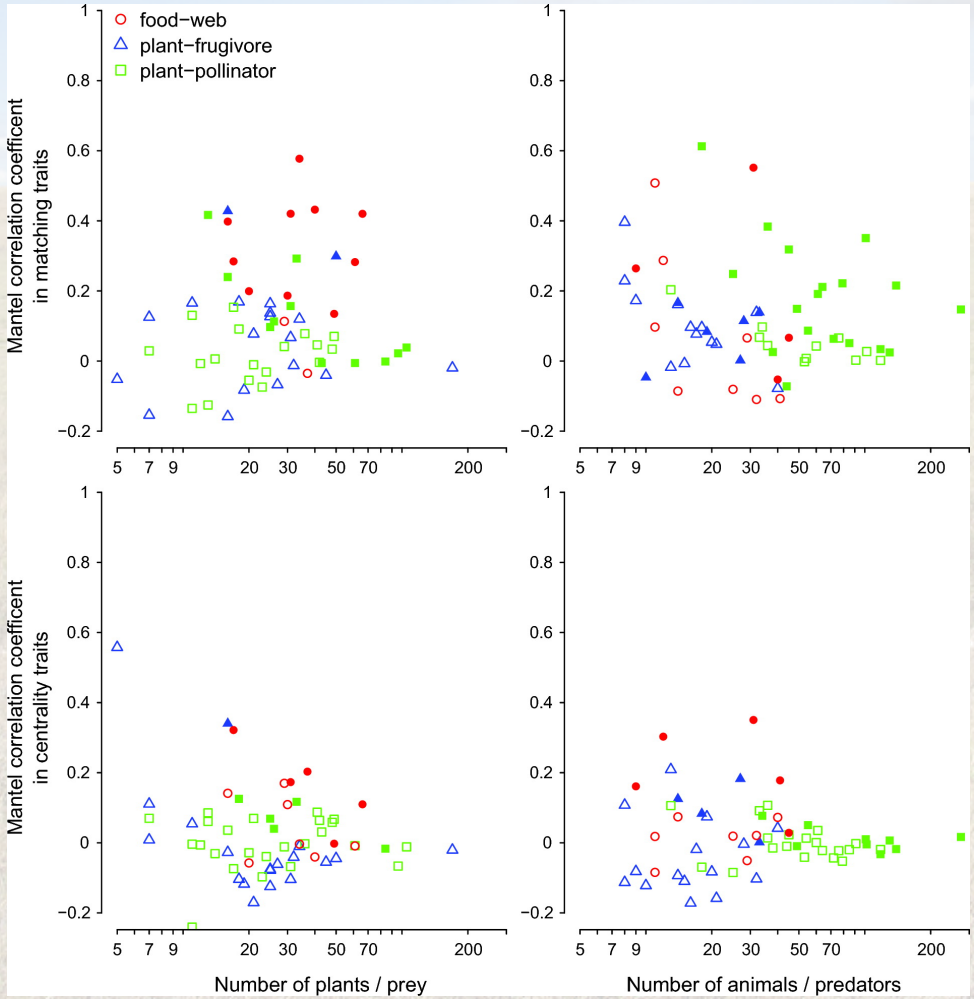
Why?

It's hard to fit a Web on a Tree because of all the fine wirings.

Courtesy of Erik Moncada

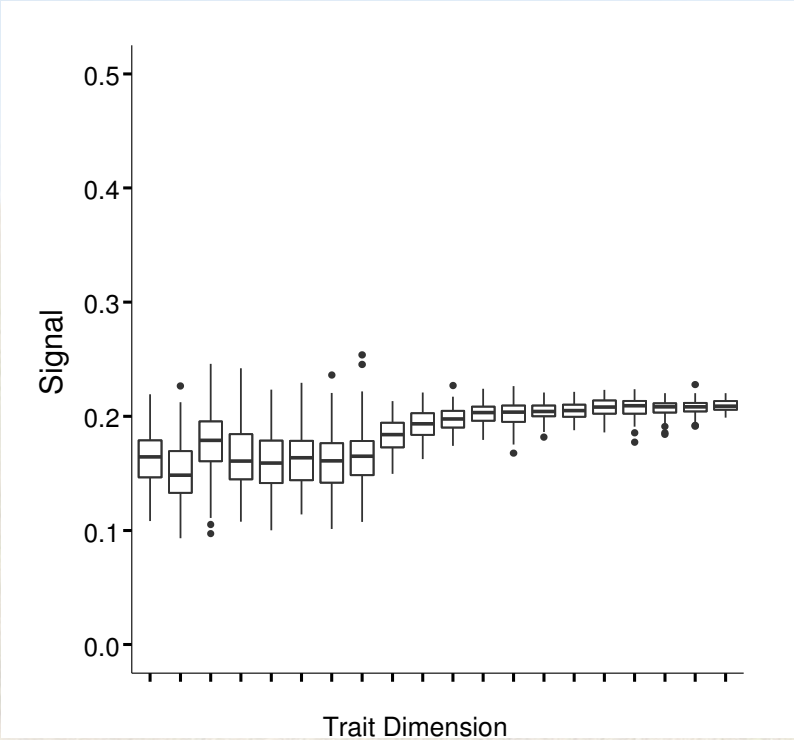
Why?

And you don't always get something out of it.

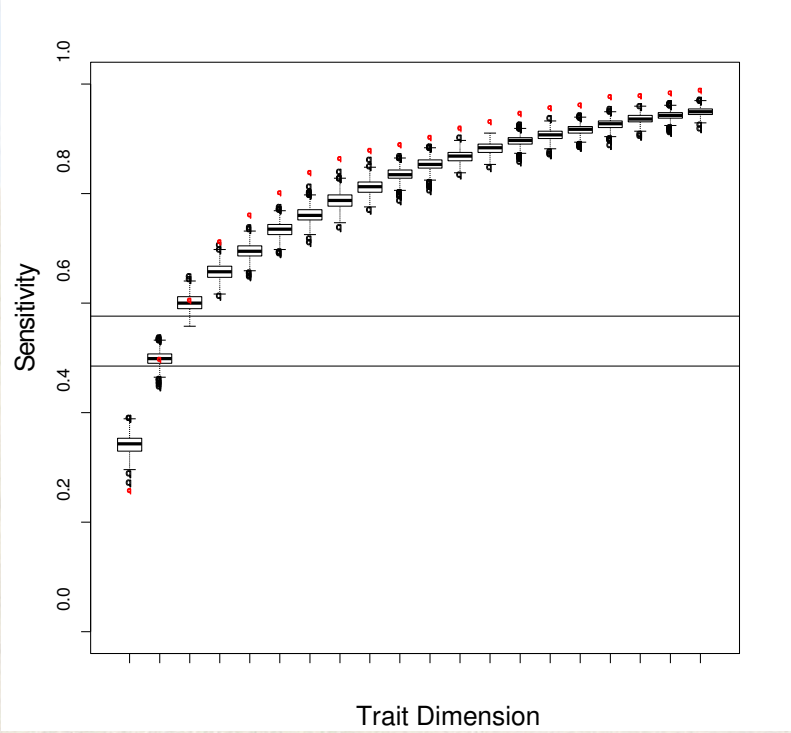


Rohr & Bascompte, Am Nat 184, 5 (2014)

What?



Phylogenetic signal



Model sensitivity

The food web's backbones web exhibits Evolutionary signal.

[1] From gvdr & Stouffer, in press

Food Webs embedded

- From $G = (V, E)$ to a metric space and back via Random Dot Product Graph

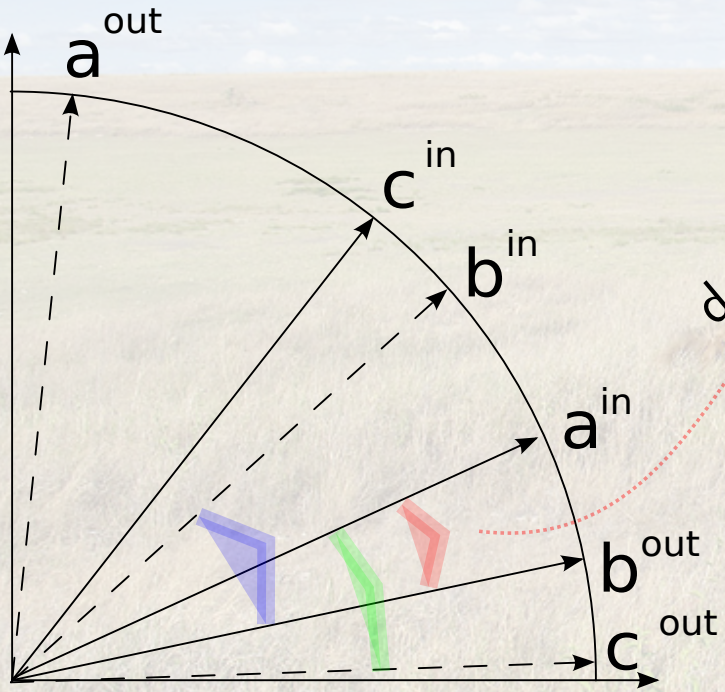
Food Webs embedded

- From $G = (V, E)$ to a metric space and back via Random Dot Product Graph
- $\mathbb{P}(i \to j) = \mathbb{T}_{out}(i) \cdot \mathbb{T}_{in}(j)$

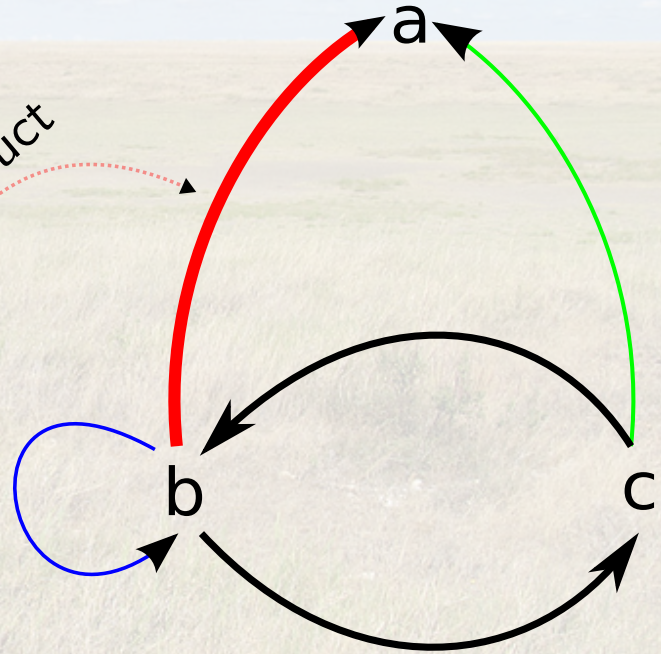
Food Webs embedded

- From $G = (V, E)$ to a metric space and back via Random Dot Product Graph
- $\mathbb{P}(i \to j) = \mathbb{T}_{out}(i) \cdot \mathbb{T}_{in}(j)$
- SVD(Adjacency) gives $\mathbb{T}_{out}$ and $\mathbb{T}_{in}$

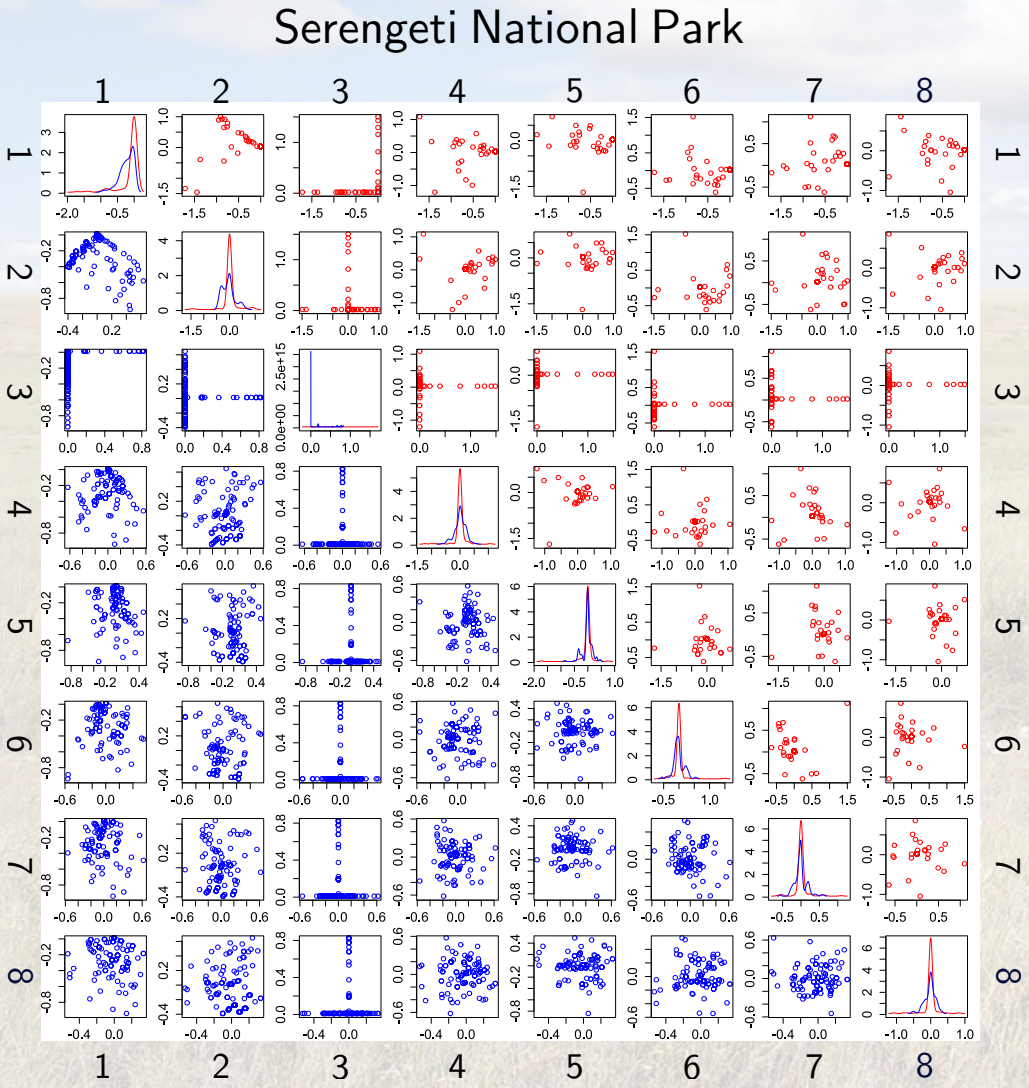
Food Webs embedded



dot product

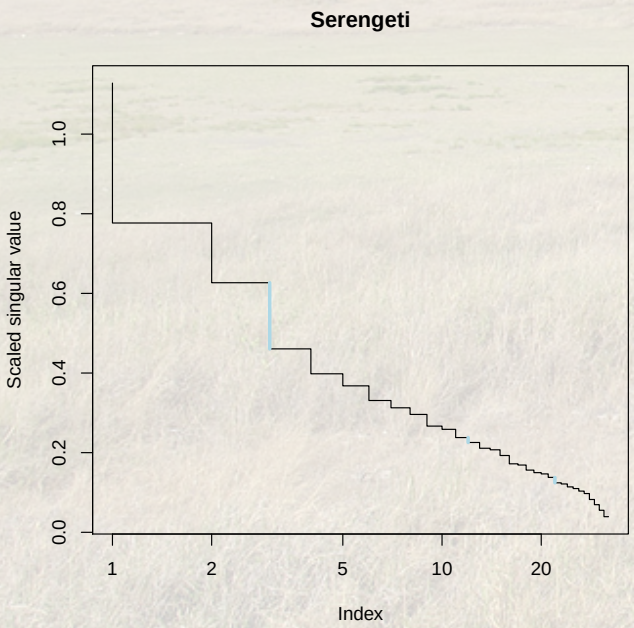


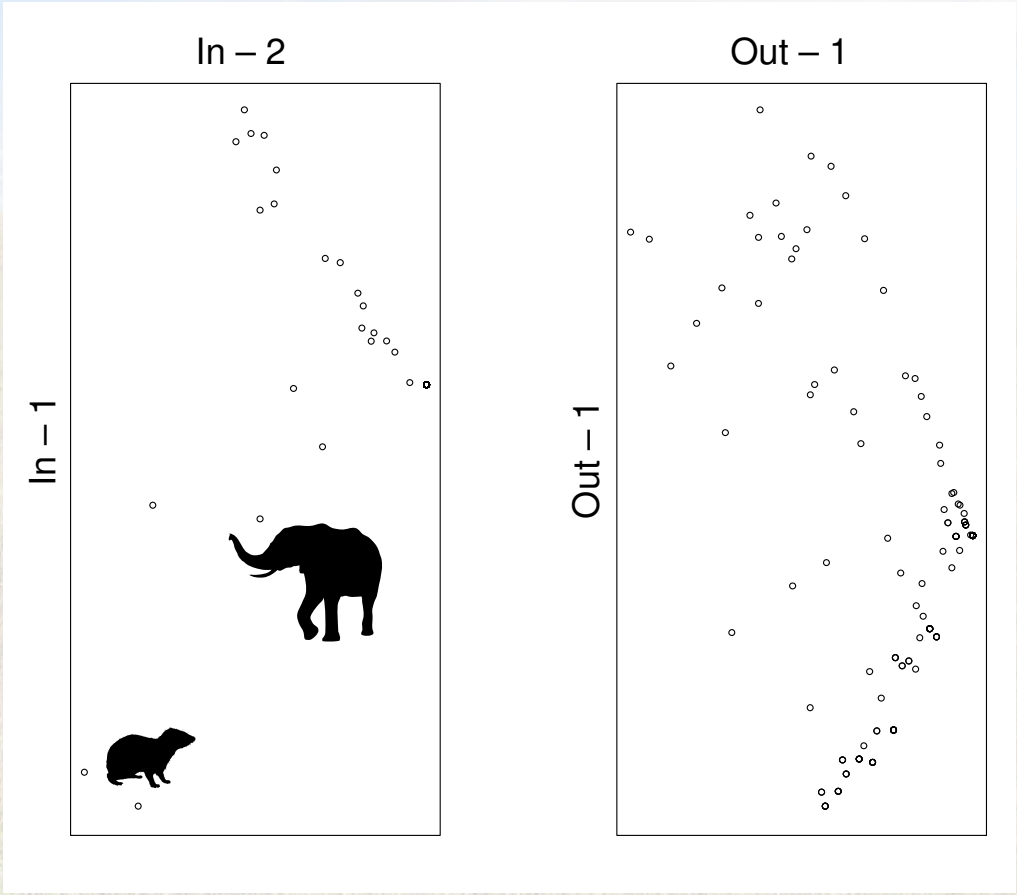
Food Webs embedded



A Food Web as you've never seen it

Food Webs embedded





SVDS allows helps in choosing a suitable model dimension.

PCM crash course

Expected vs. Observed trait distribution

$$\text{vcv}\left(\mathbb{T}|\tau, \text{null model}\right) \text{ vs. } \text{vcv}\left(\mathbb{T}\right)$$

PCM crash course

- But what null model?

PCM crash course

- But what null model?
- Brownian Motion:

$$\mathrm{d}\mathbb{T}(i,t) = \sigma \mathrm{d}B(t)$$

eventually $\sigma = \sigma(i,t)$, e.g., $\sigma(t) = \sigma_0 e^{rt}$.

PCM crash course

- But what null model?
- Brownian Motion:

$$\mathrm{d}\mathbb{T}(i,t) = \sigma \mathrm{d}B(t)$$

  eventually $\sigma = \sigma(i,t)$, e.g., $\sigma(t) = \sigma_0 e^{rt}$.
- Ornstein-Uhlenbeck (BM + rubber band):

$$\mathrm{d}\mathbb{T}(i,t) = \alpha\left(\Theta - \mathbb{T}(i,t)\right)\mathrm{d}t + \sigma \mathrm{d}B(t)$$

  eventually $\alpha = \alpha(i,t)$ and/or $\Theta = \Theta(i,t)$, "branch colouring".

More questions (than answers)

- There is phylogenetic signal

  p-values anybody?

More questions (than answers)

- There is phylogenetic signal

  p-values anybody?

- It is quite weak

  20% 30% of variation explained

More questions (than answers)

- There is phylogenetic signal

  p-values anybody?

- It is quite weak

  20% 30% of variation explained

- It saturates with dimensionality

  $d \in \{2, \ldots, 8\}$

More questions (than answers)

- There is phylogenetic signal

  p-values anybody?
- It is quite weak

  20% 30% of variation explained
- It saturates with dimensionality

  $d \in \{2, \ldots, 8\}$
- $\therefore$ "fine wirings" may be deceiving

More questions (than answers)

- There is phylogenetic signal

  p-values anybody?
- It is quite weak

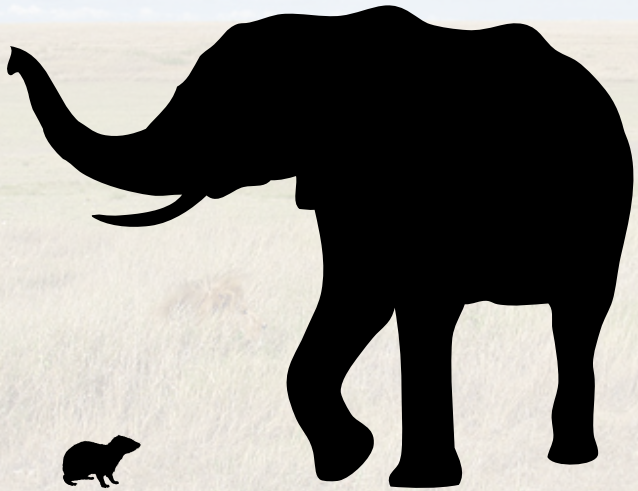
  20% 30% of variation explained
- It saturates with dimensionality

  $d \in \{2, \ldots, 8\}$
- $\therefore$ "fine wirings" may be deceiving
- Evolutionary model is inadequate

  no interaction effects

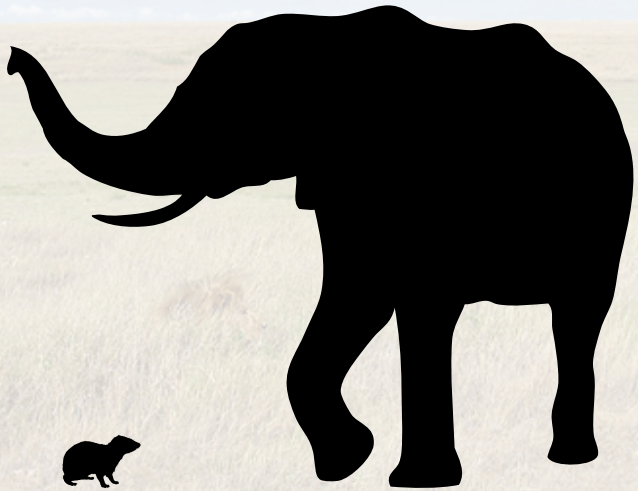
(Not a) Conclusion

- Evolutionary distinctiveness vs. Web Centrality
  Do evolutionary unique species play a keystone role in Food Webs?



(Not a) Conclusion

- Evolutionary distinctiveness vs. Web Centrality
  Do evolutionary unique species play a keystone role in Food Webs?



- An ecological informed model of species evolution maybe it's (almost) there.
  I am looking at you, Ornstein and Uhlenbeck:
  What if $\Theta = \Theta(i, T(t))$?

Thanks!

Joint work with Daniel B. Stouffer (University of Canterbury)

Many thanks to Mike Steel; Carey Priebe; A. Mooers', D.B. Stouffer's & J. Tylianakis' labs; ...

Funds by the Allan Wilson Centre for Molecular Ecology and Evolution.

By the way, I'm looking for a postdoc.
